RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 88 pages. Original publisher: Atlanta, Ga. : George W. Woodruff School of Mechanical Engineering, Georgia Institute of Technology ; Washington, D. C. : National Aeronautics and Space Administration, 1989 OCLC Number: (OCoLC)66912494 Excerpt: . . . Bellows The gripper arms will penetrate the footplate housing through a bellows assembly which will allow for radial and lateral movement of the arms while providing foreign matter exclusion protection to the components within the housing. The bellows will consist of 5 convolutions of 32 mm inside diameter and 38 mm outside diameter resulting in a span of 3 mm. The bellows free length will be 35 mm, adapted on one end to taper a length of 10 mm to the arm body. The bellows will be attached to the gripper arms and housing by flat head machine bolts. The bellows material will be of a high nickel alloy such as Mech metal with properties maintained in temperature ranges of -350 C to 250 C. See Figure 7 for the bellows arrangement. Legs Stabilizers The base assembly will be supported by four legs, 100 mm tall. This elevation will allow the gripper arms to clear the pile-up of soil which will form by auger expulsion. Each leg will be stabilized by a footpad of 2500 mm<sup>2</sup>. To prevent footplate sliding and retard vertical motion, each footpad bottom will be fitted with 100 mm long stabilizing stingers. The entire length of the stinger will be cast from Aluminum-Silicon-Magnesium alloy like the rest of the base assembly. This alloy provides good mechanical strength, light weight, and good casting characteristics. 11 This item ships from La Vergne, TN. Paperback.
