RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 40 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1914 edition. Excerpt: . . . of a cube whose volume shall be double that of a given cube. Take the edge of the given cube as the unit of length and denote by x the length of an edge of the required cube. Then $x^3 = 2$. Since no one of the divisors of 2 is a root of this cubic equation, the theorem stated in 8 implies the impossibility of the duplication of a cube by ruler and compasses. 10. f Cubic Equations with a Constructive Root. It remains to prove the theorem in 8 from which we have drawn such important conclusions. Suppose that (20) $x^3 + ax^2 + bx + c = 0$ (a, b, c rational) is a cubic equation having a root ξ such that a line of length ξ or $-\xi$ can be constructed by ruler and compasses. We shall prove that one of the roots of (20) is rational. The construction is in effect the determination of various points as the intersections of auxiliary straight lines and circles. Choose rectangular axes of coordinates. The coordinates of the intersection of two straight lines are rational functions of the coefficients of the equations of the two lines. To obtain the coordinates of the intersection of the straight line $y = mx + b$ with the circle $(x - p)^2 + (y - q)^2 = r^2$, we eliminate y and obtain a quadratic equation for x . Thus x , and hence also y , involves no irrationality (besides irrationalities in m, b, p, q, r) other than a square root. Finally, the...
